Quadruped position
Electrically adjustable headrest 0–68°

Transversal bed
Adjustable middle section 0–68°
Head-down position/Trendelenburg position 0–12°
Feet-down position 0–15°

- The 140 cm or 120 cm wide PARENTIS® double birthing bed offers lots of space and comfort for the mother-to-be and her partner to help the couple experience childbirth together.
- The mother can feel secure and free to move.
- She can adopt various positions to help soothe the pain and induce labour.
- Her partner has sufficient space available to be close to the mother-to-be, to assist her and be a support to her.
- In case of an extended birth process, the expecting parents can have a rest together.

- Parents can welcome their baby together and get familiar with each other during the bonding phase.
- For the midwife, the bed provides a comfortable and back-friendly working position.
- The bed's numerous functions enable physicians and midwives to carry out measures to induce labour, for instance height regulation, transversal bed, coccyx elevation, in a safe and easy manner.
- PARENTIS delivery beds support the friendly delivery room atmosphere. Choose different materials, colours and accessories to meet the style of your individual delivery room interior.

Pelvis support to elevate the coccyx between 0–23°
Height adjustment 63–91 cm

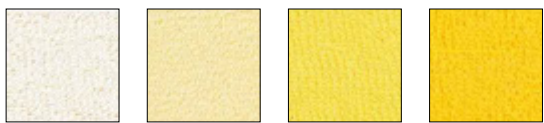

Squatting position beside the bed with grab handles

Lateral position
Surrounding standard rail holders to attach accessories
